Differentiation with existing open ended equity schemes (as on March 31, 2022) (Contd.)	<p>Investment Strategy : The Special situations can occur due to companies facing / undergoing issues like technology led disruption and innovation, regulatory/policy changes, management restructuring, or any prolonged cyclical challenges in the operating environment. The effect of these special situations on the companies' business model could be medium to long term in nature.</p> <p>Financial markets are inefficient and often slow to recognize the impact of special situations such as genuine disruptive innovation or are reluctant to accept the impact of disruption. This creates a gap between market expectations and likely outcomes and can lead to significant mis-pricing or unanticipated growth potential of these stocks.</p> <p>Disruptive change is accelerating as technological power grows exponentially, costs fall and with dramatic changes in the regulatory environment (GST, RERA, etc). Further disruption and new business models are being actively promoted by heavy investments from private equity investors and the global tech giants. This has catalyzed innovation and adoption rates further. The reward of disruptive growth is not limited only to the disruptors – it creates opportunity across the entire value chain. Apart from disruptors beneficiaries could include enablers (companies that are facilitating the change) and adaptors (incumbents who positively respond to the changed reality).</p> <p>The fund will look to invest in stocks that are:</p> <ul style="list-style-type: none"> Benefiting from disruptive change (disruptors, enablers, adaptors) on account of technology, regulatory, or any other factors or Witnessing a significant turnaround potential from a prolonged cyclical slowdown. <p>Such opportunities can be available at company level, industry/sector level or market level.</p> <p>Differentiation : An open ended equity scheme following special situations theme</p> <p>AUM (₹ in crores) : 2,160.84; No. of Folios : 82,395</p>

The factors employed are the ones that have a strong academic basis and / or are considered central by fundamental investors in their process as can be seen from the list below. The Universe would be screened for investability using quantitative measures like data availability, liquidity etc and then subsequently factors described below would be used to evaluate the stocks' attractiveness from a risk and return perspective The parameters that the model will consider are as follows:</p> <p>Fundamental Factors Technical Factors Risk Parameters</p> <p>Apart from the above parameters, the Fund Manager can consider other quantitative and qualitative parameters for selection of stocks. The approach of value investing is to identify stocks which trade at valuations lower than the overall market, their own historical average valuations or relative to their fundamental valuations. Stocks that trade at lower valuations have the potential to provide appreciation in the future.</p> <p>However, value investing needs to keep in mind the risk of value traps – that is stocks that appear optically cheap but are not really so since the cheap valuation is backed by poor fundamentals. The Scheme will have the flexibility to invest across the market capitalization spectrum (i.e. large, mid and small cap companies) and across industries/ sectors.</p> <p>The companies would be individually researched and selected only when the fund management team has satisfied itself on robustness of the company's business model, sustainability of its competitive advantage and the credibility of its top management team.</p> <p>The Scheme will endeavor that the corpus of the Scheme remains fully invested in equity and equity-related instruments at all times.</p>
